Appendix F - Qualification mapping

Determination of equivalence

A qualification is mapped as **equivalent (E)** when it provides the same occupational outcomes compared to the previous version.

A qualification is considered not **equivalent (N)** when it leads to different occupational outcomes compared to the previous version. This may happen when:

The occupational outcome or AQF level of the qualification has changed

New units have been added that introduce new skills or knowledge, and these units don't directly map with those in the previous version.

Changes to licensing, regulatory, or certification requirements support the need for a different qualification and/or unit requirements.

Status Key E = Equivalent, N = Non-equivalent, D = Deleted, NC = Newly Created

Appendix H - Units of competency mapping

Determination of Equivalence

A unit is mapped as equivalent (E) when it provides the same workplace outcomes as the previous version.

A unit is considered not **equivalent (N)** when it leads to different workplace outcomes, such as:

- The required **elements, performance criteria and assessment requirements** in the workplace have changed significantly and can't be directly mapped to the previous version
- There is **licensing, regulatory, legislative, or certification** changes that require a different unit outcome.

Status key:

- Equivalent
- Non-equivalent
- Deleted
- Newly created
- **Summary of Change:**
 - E = Element
 - PC = Performance Criteria
 - PE = Performance Evidence
 - KE = Knowledge Evidence
 - AC = Assessment Conditions

Units listed with an asterisks * have prerequisite units of competency.
